

Juniper SRX 300 Upgrade

Topic:

Upgrading OS on Juniper SRX Firewall

Purpose:

Learn how to upgrade an SRX FW using PSCP

Scope:

Using PSCP; interaction with Juniper, Upgrading the firewall

Prereq:

1. Down time scheduled with your IT business partner or Project Manager, if necessary
2. Juniper Firewall & working login
3. Console cable; and physical access to FW... just in case. https://www.silabs.com/documents/public/software/CP210x_Windows_Drivers.zip
4. SSH allowed in your firewall.
5. PSCP <https://www.putty.org/>
6. Latest Juniper Software; upgrade path. Double check w Juniper Support if you're unsure. <https://support.juniper.net/support/requesting-support/>

15.1X49 to 19.4: Direct upgrade supported

19.4 to 22.4: Direct upgrade supported

22.4 to 24.2: Direct upgrade supported

Contacting Juniper

To get access to Juniper software downloads for your company's firewalls, you typically need an account with the appropriate entitlements tied to your company's support contract. After you email they will probably give you a link to register your account etc...

1. Email

customer-care@juniper.net

call Juniper Support at **+1-888-314-5822** (U.S.) to ask about access.

2. Email Template

Here's a professional email you can send:

Subject: Request for Software Download Access – FNIT Co.

Dear Juniper Support,

I am a network engineer at FNIT Co, and we have active Juniper firewalls deployed in our environment. I am trying to access software

downloads for our devices on the Juniper website but currently do not have the necessary permissions.

Could you please assist me in gaining access to the appropriate software downloads? If additional verification is required, I would be happy to provide additional SNs, but I currently do not have access to contract numbers.

We have 20 SRX 300s, here are some serial numbers:

SNs:

XXXXXXXXXX

XXXXXXXXXX

XXXXXXXXXX

We also have 20 SRX 1500s

SNs:

XXXXXXXXXX

XXXXXXXXXX

XXXXXXXXXX

Thank you in advance!

Regards,

Zack

Network Engineer

FNIT Co.

Commands

PSCP <File location> <username@destination i.p:/destination/directory> **Command Prompt**

pscp -scp C:\Users\zroge\Documents\Juniper\junos-srxsme-20.2R3.9.tgz root@192.168.1.199:/var/tmp/

Verify File transfer **Firewall*

file list /var/tmp/

Install the software, skip the validation, don't take up extra space by copying the upgrade file, and then reboot **Firewall*

request system software add /var/tmp/junos-srxsme-20.2R3.9.tgz no-validate no-copy reboot

Delete the software upgrade file to conserve space in the /var/tmp dir **Firewall*

file delete /var/tmp/junos-srxsme-20.2R3.9.tgz

If you want to schedule an upgrade after SCPing your new software here's an example:

pscp -scp C:\Users\zroge\Documents\Juniper\junos-srxsme-20.2R3.9.tgz root@192.168.1.199:/var/tmp/

file list /var/tmp/

request system software add /var/tmp/junos-srxsme-24.2R2.18.tgz no-validate no-copy

If your firewall is using UTC time, take into consideration the difference in timezones.

request system reboot at "2025-03-15 02:00"

Use this command to verify its been scheduled

show system alarms

```
pscp -scp C:\Users\zroge\Documents\Juniper\junos-srxsme-22.2R1.9.tgz root@192.168.1.199:/var/tmp/  
file list /var/tmp/  
request system software add /var/tmp/junos-srxsme-22.2R1.9.tgz no-validate no-copy reboot  
file delete /var/tmp/junos-srxsme-22.2R1.9.tgz
```

```
pscp -scp C:\Users\zroge\Documents\Juniper\junos-srxsme-23.2R2.21.tgz root@192.168.1.199:/var/tmp/  
file list /var/tmp/  
request system software add /var/tmp/junos-srxsme-23.2R2.21.tgz no-validate no-copy reboot  
file delete /var/tmp/junos-srxsme-23.2R2.21.tgz
```

```
pscp -scp C:\Users\zroge\Documents\Juniper\junos-srxsme-24.2R2.18.tgz root@192.168.1.199:/var/tmp/  
file list /var/tmp/  
request system software add /var/tmp/junos-srxsme-24.2R2.18.tgz no-validate no-copy reboot  
file delete /var/tmp/junos-srxsme-24.2R2.18.tgz
```
